

# ByRep Protocol: The Blurb

**ByRep Protocol** is a decentralized reputation infrastructure designed to establish trust across Web3 through portable and verifiable reputation.

As blockchain ecosystems continue to grow, users interact across communities and applications without a standardized way to measure credibility, contribution, or trustworthiness. ByRep is building a reputation layer that enables users to create portable reputation profiles and establish verifiable trust across the decentralized ecosystem.

## **Current traction -**

550+ followers on X, 170+ Telegram members, 250+ Discord members, and hundreds of community applications and contributors, all achieved through a fully bootstrapped and community driven approach.
